cl. 75a/22, cl. B 44d, by Licentia Patent-Verwal-
tungs-G.m.b.H., appl. announced and laid open to in-
spection 25 Sep 58.

The high voltage is generated by a high frequency
generator (especially a one tube oscillator and dry
rectifiers, preferably selenium rectifiers with ca-
pacitors in multiplier circuit). The structural unit
comprises, for connection to the high frequency gener-
ator by means of a high frequency cable, a high fre-
quency transmitter, rectifiers, and capacitors in
multiplier circuit. The self capacitance of the high
voltage circuit is reduced to a minimum. Favorable
conditions are attained by a rectifier, a transmitter
